SNAP-IN SEAL SYSTEM
INSTALLATION INSTRUCTIONS FOR RV SLIDE OUT

A Single Flap with Living Hinge
B Bulb

Self-tapping screws

B Bottom Flap

Self-tapping screws

Remove A & B from shipping carton
**STEP 1**

**IMPORTANT - READ BEFORE INSTALLATION**

Remove existing seal and any excess debris. It is important to clean thoroughly to remove dust and moisture, creating a dry surface for the new seal to be applied to. Trim-Lok recommends a cleaning solution of one part isopropyl alcohol and one part water, and a clean rag.

Ensure each flap on A and B is at the desired length and, if needed, trim before application. The flap may be trimmed with scissors to accommodate the appropriate wiper flap action, as shown in flap detail below.

**STEP 2**

A is typically installed across the top and sides of the slide-out room. Measure and cut to the desired length. To install peel back the 3M™ Pressure Sensitive Adhesive liner and apply in desired locations. Self-tapping screws have been supplied as an additional installation aide and may be used at 6” intervals. Push down to snap the seal into place.

**STEP 3**

B is typically installed across the bottom of the slide-out room. Measure and cut to the desired length. To install peel back the 3M™ Pressure Sensitive Adhesive liner and apply in desired locations. Self-tapping screws have been supplied as an additional installation aide and may be used at 6” intervals.
